312 and although this is the traditional and common practice, it is now considered a
511 real hardship by more and more families. The quantity of water consumed by a family is usually determined by the amount of labor it can devote to water-carrying, and many families limit their use of water for bathing, for plants and animals, and for laundry. Use of the public laundry, generally considered undesirable, is made of
[296] necessity by many. The few families with water piped into their patios invariably
[351] have flourishing flower, fruit, and vegetable gardens. These families are very much
[578] envied, and not infrequently their water pipes are deliberately stuffed or damaged by less fortunate neighbors.

514 The benefits of toilets are not as generally recognized, and only one private home and the two tourist houses have toilets that can be flushed. The new schoolhouse,
[485] however, has toilets and showers, and the younger generation is becoming ac-
[177] customed to their use. The schoolteachers, the students who have been away to boarding schools, and the not insignificant number of Tepoztecans who have spent time in Mexico City are also familiar with the use of toilets and will undoubtedly be among the first to install them in their dwellings in the future. Some already have constructed screens around their latrines in their yards or orchards to afford some privacy.

515 Bathing facilities for women and children generally consist of a clay or tin basin at home; the men and older boys bathe in the river. Many women bathe and wash their hair when they do their laundry in a stream or at the public washing place.

354 No Tepoztecan house has any means of heating other than the kitchen fire.
511 This, however, gives little heat and is extinguished as soon as cooking is completed, to save fuel. In the winter months the family generally retires earlier to keep
[513] warm, but since most families have a minimum number of blankets, there is probably some suffering during the night due to cold. Except for early morning, the days are warm all the year round.

There are various means of lighting the house after dark, the most common and inexpensive being candles. Some homes have kerosene lamps and a few of the houses and stores in the center have Coleman gasoline lamps. One Tepoztecan
[377] house—that of the prosperous curer, Don Chucho—has electricity which is operated by a privately owned generator. There is talk of installing electricity in the plaza and in the church and chapels near the center, and it is probably only a matter of time before this is done.

177 Differences in house furnishings are even more striking than differences in
352 house types, and there is an unending variety of combinations of new and old or
511 modern and primitive household items. It is not at all unusual to find under one roof a battery-operated radio, a pre-Hispanic hearth as the only means of cooking, a hand mill for grinding coffee, and the Indian stone *metate* for grinding corn. Modern equipment for cooking, serving, sleeping, lighting, and so forth, is with few exceptions greatly esteemed; and in the majority of families only lack of money prevents its purchase. Among the youth, the more educated, and the large middle economic group, there is a strong desire to live better and to invest

[1939-1940]

During this administration there were some efforts to complete the highway between Tepoztlán and Yautepec. After many attempts the administration succeeded in getting the state government to send a few men to work. They completed a small stretch of road. At the end of the administration, the municipal president began to work in politics, with the aim of leaving some friend or relative of his as his successor. He even began to inform the towns in the township of the official slate, and he was quite involved because he was leaving his stepfather as the future attorney general. This slate was victorious, as may be easily understood, since there was no opposition candidate. The municipal president organized a dance for the installation, as a symbol of his satisfaction with his administrative effort, although almost nothing was done during his term, except the paving of a few streets. 175 646 661

ADMINISTRATION OF 1941–42

On the eighth of December, 1940, the victory was won by the only candidate for the municipal presidency, with the other councillors whose names were as follows: President, Fulgencio Campos; Attorney General, Saturnino Córdova; and Comptroller, Fortino Lara. To complete the installation, a lively dance was organized in the market place at eight in the evening on December thirty-first, and at ten the following morning the transferring of the municipal powers was accomplished. Shortly after the installation the municipal president called together all the councillors and employees of the township, and when they were all together he spoke to them, pointing out the errors that the previous council had committed, with relation to the frequent drinking sprees of the municipal president and all the employees. He proposed that if any one of them wanted to take a few drinks, he should ask permission the day before, so that his place might be taken by someone else. In this way, it would at least be known that an employee was not staying away because he had some other job to do. All the employees and councillors accepted the proposal. 175 646 663

The council began to work and make efforts for the introduction of electrical power into the town,[*] making trips to Mexico City to interview the chiefs of the Secretariat of National Economy. Engineers were sent to the town to make studies to be submitted for the consideration of the high chiefs of this secretariat. A few months after the installation of the municipal president, his aspirations for improvements in the town fell to earth. Before becoming president, Fulgencio Campos had many illusions about the council having plenty of funds which might be used to improve the economic situation of the inhabitants. He soon lost heart, seeing that the municipal treasury was not receiving the money that he had imagined it would. He had also been saying that the previous presidents had done nothing for their people because they did not want to, and that they became presidents in order to get drunk and to commit misdemeanors. [377]

Saturnino Córdova was functioning as attorney general and under-secretary of the Ministerio Público, and he was not at all qualified, for he could hardly sign his name. The municipal president proposed that it would be preferable that Córdova might better occupy the post of comptroller, changing with Fortino Lara so that the latter might become attorney general. Córdova was not opposed to this and in an act of council the change of commissions was recorded.

This council had many difficulties with the Commissariat of the Ejidos, because the [624]

[*] In 1947, the date of my last visit to the village, Tepoztlán still had no electricity.

177 511 [265] [275] aged foods, mostly to the employed people who live in the center. Old women sold ready-made tortillas in the plaza. There was still no restaurant but there were more saloons. A blare of radios came from the houses and inside some homes one saw a new kerosene or Coleman stove, aluminum pots, kerosene or gasoline lamps, forks, and hand presses for shaping tortillas. At least one home had overstuffed furniture.

[161] [362] But many more changes have occurred than meet the eye. As a result of the population increase—from 3,500 in 1940 to approximately 4,800 in 1957—there is a shortage of housesites and housing, and Tepoztecans petitioned the local government to make available some of the nearby communal lands for new housesites. Several homes have been built on the outskirts of the village and in the surrounding *cerros*. Formerly it was not customary to rent [427] a house; if a Tepoztecan had an extra house he would allow another villager to use it simply for the care of it. Now rental has become quite usual.

177 [759] Since the late forties Tepoztlán has had a resident doctor and since 1952 a doctor from Cuernavaca who formerly practiced in the village has come once a week to see his patients. The clientele of both doctors has been increasing. In 1950, the resident doctor had an average of 75 patients a [278] month; by 1956 the average was 160. Tepoztecans now complain about the expense of medicines and the delay caused by having prescriptions filled in Cuernavaca; the local "druggist" cannot fill prescriptions and carries few [743] patent medicines. The village has a free federal government health clinic which cares for children and pregnant women and administers injections. [744] About ten patients, most of them expectant mothers, come there every day. [751] In 1955 approximately two thousand vaccinations and revaccinations were given.

177 757 753 [759] [844] The clinic and the doctor have by no means replaced the *curanderos*, however. Tepoztecans believe that doctors can cure only certain diseases, and still frequent *curanderos* for those illnesses which they attribute to *los aires*, anger, hot or cold foods, evil eye, and sorcery. Most births are still attended by the native midwives. If the doctor happens to cure an illness thought to be caused by *los aires*, this is taken as proof that the *aires* were not truly the cause. Although the villagers have substituted new terms for old concepts—for example, *los aires* are now sometimes described as tiny animals or microbes and injections are called "cleansings"—it is questionable whether this represents much of a departure from the earlier magical thinking about the causes of disease.

177 241 [312] [377] [464] [314] Like many villages in the densely populated central plateau area, Tepoztlán has not had the benefit of the great new hydroelectric and irrigation projects. Its agricultural base has remained very much the same; there has been no mechanization and no new important cash crops have been introduced. The peasants continue to work their land as before, although a few are now using some commercial fertilizer. Because the lack of change in agriculture combined with the rapidly increasing population has forced Tepoztecans to seek work in nonfarm occupations, a much lower proportion of the gainfully occupied are now peasants. The federal campaign for the preservation of

than spend the time and energy in walking. A count made on a Wednesday in July 1956 showed that 84 vehicles entered the village and 94 left it between 5 A.M. and 9 P.M. Thirty-six percent were buses which ran about two times an hour in both directions (to and from Cuernavaca), 41 percent were passenger cars, and 23 percent were trucks. The trucks carried various products—corn, pigs, plants, beer, gravel, groceries, soft drinks, and petroleum. A similar count made on a Sunday gave a total of 373 vehicles entering and leaving. The buses carried approximately 800 passengers during the day.

In 1943, the number of radios in the village was only three or four; by 1956 it had risen to eighty, battery operated, for electricity had not yet come to the village. The owners were mainly under forty; older people showed little interest in radios. Most of them had been bought in Cuernavaca since 1950 at prices ranging from 400 to 3,500 pesos. They were intended chiefly for family use but their presence has increased visiting and sociability among the younger people. The listeners are usually not program conscious. Whenever they want to listen to something, they turn the dials to whatever sounds good. *Ranchero* music is the most popular attraction, news a secondary item. Major obstacles to the further use of radios have been lack of money and the absence of electricity, which meant trouble and expense in keeping the batteries charged. About 15 percent of the sets were not working in July 1956 because the batteries had run down. Tepoztecans who had relatives or *compadres* among bus drivers could have their batteries installed in a bus for a day and so have them charged without cost.

In 1956, as part of a federal government project to improve communications, a telephone exchange was installed in a small grocery store in Tepoztlán. Six phones were listed for the village in the Cuernavaca directory, almost all of them for local businesses. Storekeepers can now make orders, politicians can arrange meetings, and in emergencies ambulances and doctors can be reached by phone. During the day, calls are sent and received through the central office; at night, when the central office is closed, calls go to the *Posada*. The grocer charges 50 centavos to call someone to the phone, provided they live near the center of the village. During my stay in the village in 1956 a few calls from Hollywood were received by the village government—arrangements for the filming of another movie in Tepoztlán were in process!

Tepoztlán now has a movie, operated by a villager who had been a *bracero*. The movies are shown on week-ends from October to May in one of the large rooms of the municipal building which seats about 300 people. The movie business is an insecure one in Tepoztlán, however; it cannot always successfully compete with the fiestas. Most of the films are Mexican cowboy and war pictures which appeal to young people. Adults over forty do not frequent the movies and most of the peasants do not permit their daughters to attend.

Despite the higher educational level, greater travel, and the increase in radios, our data suggest that there has been no increase in the number of people who read newspapers. On the contrary, there seems to have been some decline since 1943. In 1956, only about twenty-five individuals read a news-
